

Admin User Manual

Welcome to the Admin Dashboard for Ababil's Attire by Sanjida Bethi. This manual will guide you through managing your online store.

1. Admin Login & Logout

- **Login:** Navigate to `/admin` or click the Admin login link (if available on the site). Enter your admin email and password.
- **Logout:** In the admin dashboard sidebar, click the "Logout" button to securely end your session.

2. Dashboard Overview

Upon logging in, you will see the **Dashboard**. It provides a quick glance at:

- **Total Orders:** The overall number of orders placed.
- **Recent Orders:** A list of the latest orders that need your attention.
- **Key Metrics:** Summary of active products and customers.

3. Product Management (Dresses & Cakes)

You can manage both Dresses and Cakes from the **Products** section.

- **Adding a Product:**
 - Go to the "Products" tab in the admin sidebar.
 - Click "Add Product" or the equivalent button.
 - Fill in the product details: title, description, category (Dress or Cake), price, and any options (like size or flavor).
 - Upload product images.
 - Save the product. It will immediately appear on the storefront.
- **Editing a Product:** Click on any existing product in the list to update its details, stock status, or images.

4. Order Management

The **Orders** section is where you process customer purchases.

- **Viewing Orders:** You can see a list of all orders with their statuses (e.g., Pending, Processing, Shipped, Delivered, Cancelled).
- **Order Details:** Click on an order to see what the customer bought, their delivery address, and payment information.
- **Updating Status:** As you work on an order, update its status so the customer can track it accurately.
- **Manual Orders:** If a customer orders via Facebook or phone, you can manually enter their order details from the Admin Orders page to keep all records in one place.

5. bKash Advance & Payment Reconciliation

Important: The store does *not* automatically deduct money via a bKash integration.

- When a customer checks out, they are asked to send a minimum advance (or full payment) to your bKash merchant/personal number.
- They submit their **TrxID**, **Last 4 Digits** of their number, and a **Reference Name**.
- **Reconciliation:** When you receive a new order, you must manually check your bKash app or SMS to confirm the TrxID and amount match the order. Once verified, you can update the order status to "Processing".

6. Customer Management

- Go to the **Customers** tab to see a list of everyone who has placed an order.
- You can view a customer's order history and contact details, making it easy to assist them or reach out if there is an issue with their delivery.

7. Delivery & Production Workflow

- **Pending:** Order received, payment unverified.
- **Processing:** Payment verified, item is being prepared (baking cake or tailoring dress).
- **Shipped:** Handed over to the delivery service.
- **Delivered:** Customer received the item.
- Use the provided **Invoice/Delivery Slip** feature (if applicable) to print details to stick on the delivery package.

8. Store Settings

- The **Settings** page allows you to configure basic store information.
- Here you might update contact information, social links, or delivery fees that appear on the customer-facing site.

9. Common Mistakes & Troubleshooting

- **Unverified Payments:** Never ship an item before verifying the bKash TrxID manually.
- **Wrong Status:** If an order status is updated by mistake, simply click the order and change it back.
- **Lost Admin Password:** If you forget your password, contact technical support to reset it via Supabase, as self-service admin resets may not be fully configured.
